

B99 USB direct connect cable

www.boschsecurity.com

BOSCH

Invented for life

- Allows programming on-site without an Ethernet cable or interface module

The B99 is a Male A to Male A USB cable used to directly connect a computer to a control panel for programming with Remote Programming Software (RPS) by Bosch. The cable allows programming while on-site and without the need for an Ethernet connection or an interface module.

Use the cable with the following control panels, which include an on-board USB port:

- B9512G/B9512G-E
- B8512G/B8512G-E
- B6512
- B5512/B5512E
- B4512/B4512E
- B3512/B3512E
