CDV Series
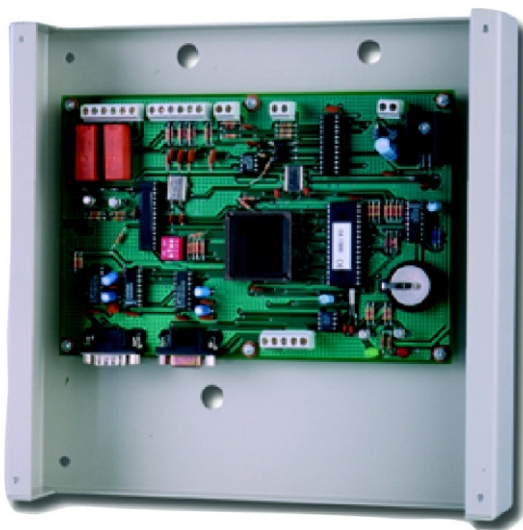

UGL ACCESS CONTROL
8-Door On-Line

The UGL control unit is the heart of our 8 door, on-line access control system. It handles all transactions and keeps in it's memory all cardholder information, door configuration, time zones etc. It communicates with the door reader controllers via an RS485 bus. The system can incorporate multi-reading technology.

8 readers
2,944 cardholders
17,664 badges (6 per cardholder)
30 system time zones, 4 schedules per zone
Access level definition
Free access on readers 1, 2, 3 and 4
"First Man In" feature
Antipassback on readers 1, 2, 3 and 4
Fully featured queries and reports
Scheduled reports (hours on site)
Door status and forced door monitoring
16,000 event memory
Site maps - 4 level zoom *NEW FOR 2001*
Download/upload - not pc dependent
On-line remote sites (point to point modem)

CMPP/LOG

The LOG/MT software allows the user to modify, save and view all information available in the UGL. Full cardholder database, door descriptions, time zones programming etc are standard, as is the ability to tailor reports specific to cardholder transactions, doors and alarms by date criteria.

The CMPP learning reader assists in programming cards/tags into the system and identifies found cards to an individual.

It is desk or wall mounted.

Specification

8 Readers, Multi Technology
