

AccessDesigner – the new EVVA planning and ordering software

Simply plan and order locking systems

AccessDesigner is the new EVVA software, a locally installed online solution to make planning and ordering locking systems easier. Use it to plan mechanical and electronic locking systems and also order the required cylinders and keys. Extensions and repeat key orders are just as easy and quick thanks to this software.

AccessDesigner by EVVA makes your work easier

Planning and ordering is fast and easy, creates transparency in terms of orders and correct deliveries within a short period of time.

Technical requirements

- › Microsoft Windows (Windows 10)
- › Screen resolution: min. 1024x768
- › Approximately 150 MB hard drive space
- › Internet connection

The most important functions at a glance

- › **Data access** – free access to existing EVVA system data
- › **Import and export** – simply import locking charts from Excel and export them from AccessDesigner
- › **Version history** – older system versions remain backed up as a result of automatic data backups
- › **Locking chart checks** – plausibility check of the locking chart prior to ordering
- › **Data backups** – your data is safe here – automatic data backups at EVVA's own data centre
- › **Product configurator** – order codes are always up to date in the software – makes transparent orders so simple
- › **Manage individual profiles** – EVVA individual profile partners can manage and enhance their individual profile using this software
- › **Linked to your production** – Connect AccessDesigner to a key milling machine
