AirKey | The locking system for flexible applications

AirKey

» Just as dynamic as our customers' needs «

AirKey is the innovation from EVVA. Developed and manufactured in Austria, the electronic locking system offers flexible solutions for daily, around-the-clock business, in particular for businesses with various sites. With AirKey the key is sent via the Internet. All you need is an NFC-compatible mobile phone, Internet access and an AirKey cylinder or AirKey wall reader. The AirKey app and the unique EVVA KeyCredits turn this smart locking system into a user-friendly, complete solution.

AirKey benefits at a glance

- › The mobile phone is the key
- › Keys/authorisations are sent via Internet
- › Free software as a web service
- › Modular, adjustable cylinder
- › Quality made in Austria

EVVA | A tradition with a future

Founded in Vienna in 1919, the EVVA Group is now represented by the headquarters in Vienna, 10 subsidiaries in Europe and distributors worldwide. EVVA employs around 800 people throughout Europe.

Three engineers joined forces in 1919 to form the "Erfindungs-Versuchs-Verwertungs-Anstalt" (Invention, Experimentation and Application Institute), or EVVA for short. In 1937, EVVA received the first patent for a cylinder padlock, helping the company to strike out on the path of security technology. Nikolaus Bujas took over the company in 1973, invested in machinery and expanded the in-house research and development department.

Research, development + expansion

At the end of the 1970s, Sven Berlage pushed forward the expansion of the branches, as well as export and international positioning of the company. Since 1999, Stefan Ehrlich-Adám has been the third generation at the head of the

family-run company. He is setting the course for a successful future for EVVA. Alongside tradition, research and development are key focus areas. Innovation and development are important elements to help EVVA grow into a major, international player. EVVA is already a leading manufacturer of access solutions in Europe.

Perfect mechanical solutions + innovative electronic solutions

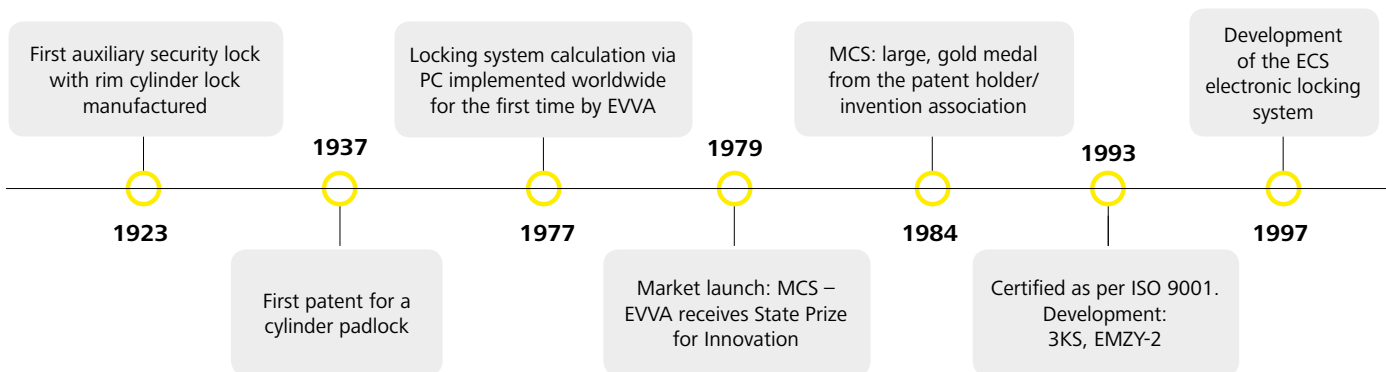

EVVA as a company with a tradition is amongst the top suppliers of mechanical locking systems.

In 2014 EVVA launched Xesar and AirKey, the two innovative electronic locking systems which are a result of our long lasting professional experience.

Facts + figures

-
- Headquarters in Vienna + ten branches
-
- 800 employees throughout Europe

Overview of innovations

**EVVA –
innovation
since 1919**

EVVA continues to invest in its workforce

Corporate social responsibility (CSR)

For EVVA, CSR is more than just image, it is a necessity. Particularly for top technology companies, it is essential to work as sustainably as possible. Protecting environmental resources, investing in employees and paving the way for economic success.

Photovoltaic energy generation at EVVA

Clean production

EVVA is increasing its focus on an oil- and water-free production of products. This type of production, known as clean production, offers a wide range of advantages. EVVA has received numerous prizes for sustainable innovations. Examples include the Leonardo Award 2004, the Environmental prize 2011 from the City of Vienna, the TRI-GOS Award 2012, as well as the annual "Ökoprofit-Auszeichnung" (Ecological Project for Integrated Environmental Technology Award) every year since 1999.

AirKey | Service providers

Serving humans

An increasing number of people is receiving medical treatment in the comfort of their own homes. Regardless of whether this is done by community nurses, family members or a mixture of both.

It may also be possible that the person responsible for care is unable to make the appointment at short notice and someone else has to cover for them.

Now, how does this person access the corresponding premises? In such cases, the AirKey locking system allows you to quickly and easily send authorisations/keys to a mobile phone. You may also restrict the access times, depending on the time period that is actually needed for the treatment.

Mobile security

You require reliability and flexibility whenever a high degree of mobility is involved or it is paramount to absolutely safeguard the care of vulnerable persons and the security of possessions. Circumstances can change quickly. However, you must guarantee access in all cases.

The AirKey locking system is just the right, flexible solution if your situation changes at short notice. You can centrally grant access authorisations at short notice, for instance to community nurses, security or maintenance services. If required, you can even restrict the access times. As a result, persons and property are reliably looked after and protected.

Save time

Handing over keys is a thing of the past. Nowadays, with AirKey, the access authorisations are sent over the Internet. It's quick and there are no shipping times. This – most of all – supports community nurses as they protect and care for the most vulnerable members of our society.

AirKey app
» Page 38

Ultimately flexible

If your circumstances change at short notice, AirKey is just right for you. The key can be sent to a mobile phone or written by a mobile to an identification media.

AirKey identification media
» Page 36

Transparent security

With AirKey you are always fully aware if and when someone locked a cylinder. This gives owners as well as service providers the required transparency and security.

AirKey | Businesses with various sites

Trend

Nicely in control

It all starts with one branch, you expand more and more, spread across the region and branches may have different opening times as well as organisational demands. An enormous challenge for goods delivery logistics, cleaning or part-time staff. AirKey was designed for absolute access control for you to be able to react quickly and flexibly to changing circumstances. Quickly and easily grant or revoke access authorisations online – at any time. Pay per key keeps costs at bay.

Dynamic security

A branch network is subject to dynamic laws. Systems must allow you to grant access authorisations to different persons at different times. This results in enormous organisational challenges and requires an access system that offers great flexibility and maintains maximum security.

This is what AirKey represents: an agile, extremely flexible locking system that applies web-based software and can be configured from anywhere in the world via the Internet. As a consequence, branch managers or the head office can quickly and unbureaucratically grant or revoke (limited validity) access authorisations using a simple user interface.

In control of security

AirKey gives managers full control of their branches. They can quickly and easily grant access authorisations to the identification media or mobile phones of suppliers, cleaning or part-time staff.

AirKey identification media
 » Page 36

Perfect control

AirKey wall readers allow to ideally operate electronically controlled door situations, such as sliding and swinging doors or turnstiles.

AirKey wall reader
 » Page 62

At a glance

The head office can view event logs at any time. This facilitates plans for the future, yet does not impede the branches' right to manage their own processes.

AirKey | Small businesses + shared office

Secure, new working environment

Architect, PR agency and mediator under one roof?

Shared offices are definitely up and coming. In this process, participants not only share facilities and costs. They also enhance their horizons beyond their own businesses, recommend customers and link otherwise unrelated subjects to each other.

The locking system in said office communities must be as flexible as the shared office concept itself. Different access authorisations, simple application and guaranteed maximum security with regard to access from the outside, but also amongst shared office members. The ideal solution: AirKey.

Flexible security

Today's working world demands a locking system that is as flexible as the continuously changing work processes. However, it must simultaneously safeguard maximum security – just like in traditional corporate structures.

AirKey is exactly this type of locking system that offers maximum flexibility and maximum security. Manage access authorisations using a simple, web-based user interface. EVVA centrally manages the online administration in the background.

Simply secure

Access authorisations are simply granted in the online administration. There is no need for an own IT infrastructure. This saves resources.

AirKey online administration
 >> Page 28

Be more flexible

Quickly grant access authorisations to any mobile phone. This will allow external workers to access the premises at short notice, for instance to complete a project.

AirKey app
 >> Page 38

Shared security

The community kitchen is often a central area in shared offices. As a result, you can manage individual cylinders together and let social networking take its course.

AirKey cylinders

AirKey | Private premises

Complete smart homes

Are you sure the coffee machine is off, the feeder in the fish tank has been activated and the cat is not locked in the basement? These are all questions that arise mostly when the entire family is already sitting comfortably in the car, on the way to the holiday destination. Would it not be handy if you could now send your neighbours an electronic key to their mobile phone? An access authorisation with limited validity, just to check out the situation? With AirKey this now all becomes possible. Access authorisations can be quickly and directly granted to mobile phones via the Internet. The perfection of all smart homes.

No worries about security

The person that was supposed to look after your cat has broken a leg, there was no time to hand over the keys and you lost the third set of keys a long time ago. AirKey was designed to still allow you to go away for the weekend without having to worry. Worldwide online key assignment with restricted access authorisations and a seamless event log. The battery-powered cylinder is installed in no time and it is started up using a mobile phone. The user interface is very clearly structured and features comprehensive functions. There is no need for lengthy instructions.

In control of your home

Quickly and easily grant access authorisations and view the event log online at any time. As a result, your home will never be unmonitored again.

AirKey online administration
 >> Page 28

Smart doors

AirKey cylinders with their trendy design fit in any door. There is no need to drill holes or make structural alterations to the door. Initializing the cylinders can be managed by using a mobile phone.

AirKey cylinders
 >> Page 42

Providing spare keys

You can immediately delete any access authorisations you granted in the event the mobile phone is lost. Alternative mobile phones can be authorised immediately.

System overview | Unrestricted liberty

This is how easy it is

AirKey is an effective and highly innovative electronic locking system. Here, the Internet and existing mobile phone networks are used to send access authorisations across any distance.

All this is made possible using an NFC compatible mobile phone – because with AirKey the mobile is the key. This allows to lock any AirKey locking component using a mobile phone. The mobile phone additionally forwards all the information from the door to the online administration to keep the entire system up to date.

Additional identification media

Other identification media, such as cards or key tags can also be programmed using a mobile phone or coding station.

Worldwide data exchange

Mobile phone networks or the Internet are used to exchange security information between mobile phones and the EVVA computer centre across continents.

AirKey cylinder + AirKey wall reader

The cylinders and the wall reader are security products with superior design, suitable for indoor and outdoor application that can be unlocked with an authorised smartphone or identification medium. They save up to 1,000 events and are able to transfer this information to the online administration via the smartphone.

NFC-compatible mobile phone

Use the installed AirKey app to receive access authorisations and turn your mobile phone into an electronic key. During the locking process, AirKey cylinder status data is temporarily saved in the app and transferred to the online administration upon the next contact.

EVVA server

With AirKey requires no individual IT infrastructure. The EVVA server guarantees the highest degree of security and data availability.

AirKey online administration

It allows you to grant access authorisations to unlock AirKey locking components and many more features. All you need is a computer or notebook with an installed browser, an Internet connection and sufficient KeyCredits.

System overview | Component sharing

AirKey is the first system to offer property owners or property management companies the option to outsource the management of

parts of their locking system to business or residential tenants. This type of locking system sharing brings numerous benefits for everyone involved.

-  Tenants are delighted about the increased **flexibility due to individual authorisations** and can create individual authorisation structures.
-  The **authorisation** can be adapted precisely to the **duration of the tenancy** and can be revoked at any time.
-  Landlords remain in full **control of their locking components** and their states (e.g. battery status, access).
-  The **data protection settings** for event logging can be individually adjusted for each component, both by owners and tenants.
-  Tenants can choose their **matching KeyCredit licence model**.

System overview | Multi-administration

AirKey allows a simple management of companies with distributed sites and complex personnel structures. AirKey's multi-administrator feature allows

the determination of multiple administrators that can not only manage their own sites, but also the entire locking system across all sites of the company.

-  More flexibility thanks to an **individual management of independent company units**. This saves management costs.
-  **Authorisations** are **granted locally**, multi-administrators can manage all company sites.
-  Remain in control of multi-administrators' actions.
-  Anonymity and the saving of personal access event logs can be adjusted as per **national data protection guidelines**.
-  Free software and **appealing KeyCredit flat rates**.

System overview | Seamless security

Privacy by design

AirKey provides solutions to technically safeguard compliance with data protection guidelines. The technically sophisticated design applies cutting edge security mechanisms and ensures seamless security at all stations in the background.

Here are the most important security characteristics:

Secure data transport

All transferred data is secured as end-to-end data, as per the cutting edge encryption standards.

As a result, it offers decryption protection from EVVA servers to the AirKey locking component.

Secure AirKey identification media

AirKey exclusively uses highly secure NFC smart cards.

Security at AirKey locking components

Thanks to the use of certified secure elements – highly secure memory elements which are actively encrypted and decrypted – AirKey sets new security benchmarks for locking components and identification media for electronic locking systems.

Access authorisations on compromised mobile phones or identification media that are in circulation can be deactivated by updating the blacklist.

An event log for the last 1,000 access events ensures seamless transparency.

The AirKey cylinder is equipped with drilling protection, plug pulling protection, rotary damper and rated break point on the outside thumb turn.

Data saved securely

Data on the EVVA server is secure and protected from external access.

The online administration is operated from a redundant EVVA server with a high level of availability.

Automated data backups in Austria.

Security on mobile phones

The AirKey app can be secured with a PIN code.

Added security with the activation of memory locks on mobile phones.

If you lose your phone, the online administration allows to immediately delete access authorisations using an Internet browser.

Secure data management

The data exchange between your Internet browser and the EVVA server is implemented using a secure, protected https connection, a technology also used in online banking.

System overview | AirKey layout

AirKey locking components easily match any requirements for access solutions thanks to their versatile characteristics and numerous versions.

The vast number of organisational options, the fact that no expensive IT infrastructure is required and the easy assembly allow to quickly and simply install AirKey.

AirKey locking components

The most important characteristics of AirKey cylinders and AirKey wall readers:

	AirKey cylinder	AirKey wall reader
Suitable for indoor and outdoor use	●	●
Suitable for security areas	●	●
Most convenient operation		●
No cabling required for the installation	●	
Battery-operated	●	

● Perfectly suited

» Page 42

Please take note of the countless versions and the wide range of accessories that enable even more applications.

Various sites

The options of assigning authorisations from anywhere in the world make AirKey ideal for use across various sites.

AirKey app

The AirKey app saves access authorisations of different systems. It is also a coding station for further identification media and transfers the information stored in the cylinder to the online administration.

Inside access

AirKey is also effective on the inside, e.g. in buildings with shared utilisation (shared office).

The AirKey authorisation function allows to share administration authorisations. Easier to manage combined systems.

Side entrances

Send access authorisations to suppliers or maintenance service providers.

System overview

Security areas

Benefit from the option to restrict access times and record event logs for sensitive areas.

Main entrances

AirKey wall readers are perfectly suitable for securing outdoor areas.

Optimum initial equipment

System overview | Processes

Installing software and components

Installing locking components
AirKey cylinder installation, e.g. in doors; AirKey wall reader installation, e.g. for sliding doors.

App download
Simply download the free AirKey app.

Registration
Use your browser to register to the AirKey online administration and create a new locking system.

Creating and setting up authorisations

Entering changes
Use the online administration to change authorisations and settings.

Creating access authorisations
Simply drag-and-drop access components to the mobile phone or identification media to create access authorisations.

Creating identification media
Simply transfer access authorisations to mobile phones or create identification media.

Set up the locking system

Registering mobile phones
Register all NFC-compatible mobile phones that are to be authorised to access the system.

New locking components
All locking components within the locking system are added using an NFC-compatible mobile phone in maintenance mode.

Redeeming KeyCredits
Simply enter one or several KeyCredit codes in the online administration.

System administration | Reading out information

Blocking
The access event and the battery level of the identification media are temporarily saved and transferred to the online administration upon the next contact.

Updates
In this process, each app user can update system information between cylinders and online administration.

Who accessed what and where?
Access events and door information is available at any time, such as the number of times the lock has been opened, user access events, times, battery status.

AirKey app + online administration

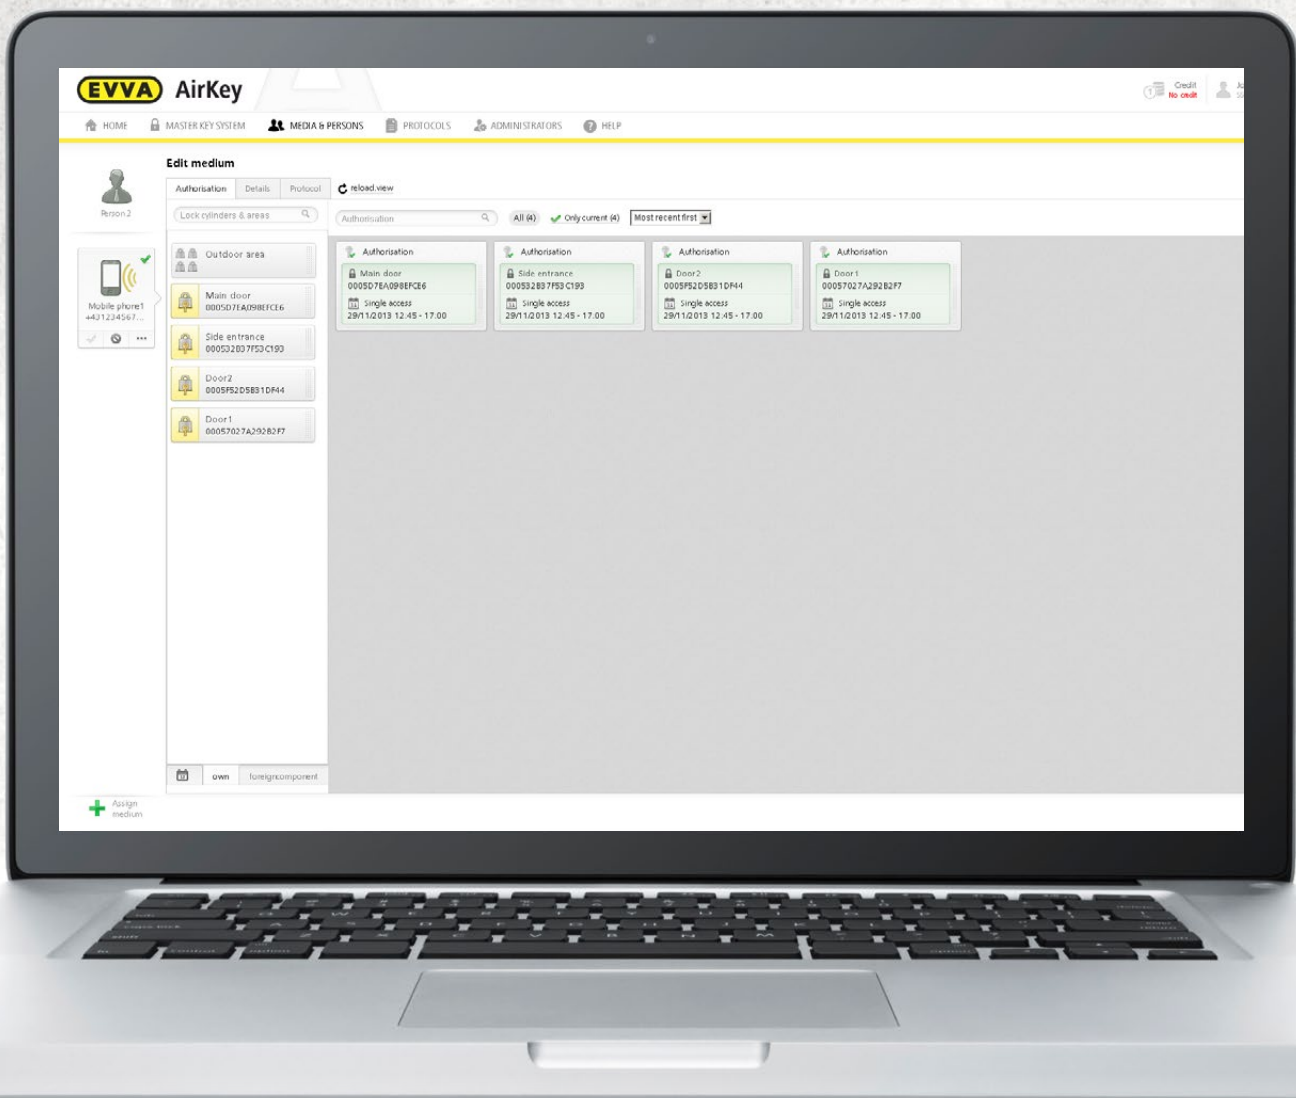

*» Simple and secure –
no need for additional infrastructure «*

AirKey online administration

The revolutionary AirKey security concept manages security settings using a browser to send access authorisations to mobile keys, such as NFC-compatible mobile phones. In this process, changes to access authorisations and system information are processed using a secure, encrypted Internet connection.

You require no additional software – your data is saved securely by EVVA. Benefit from the security and performance of the EVVA server and its maximum availability IT infrastructure.

AirKey online administration

AirKey online administration | Benefits

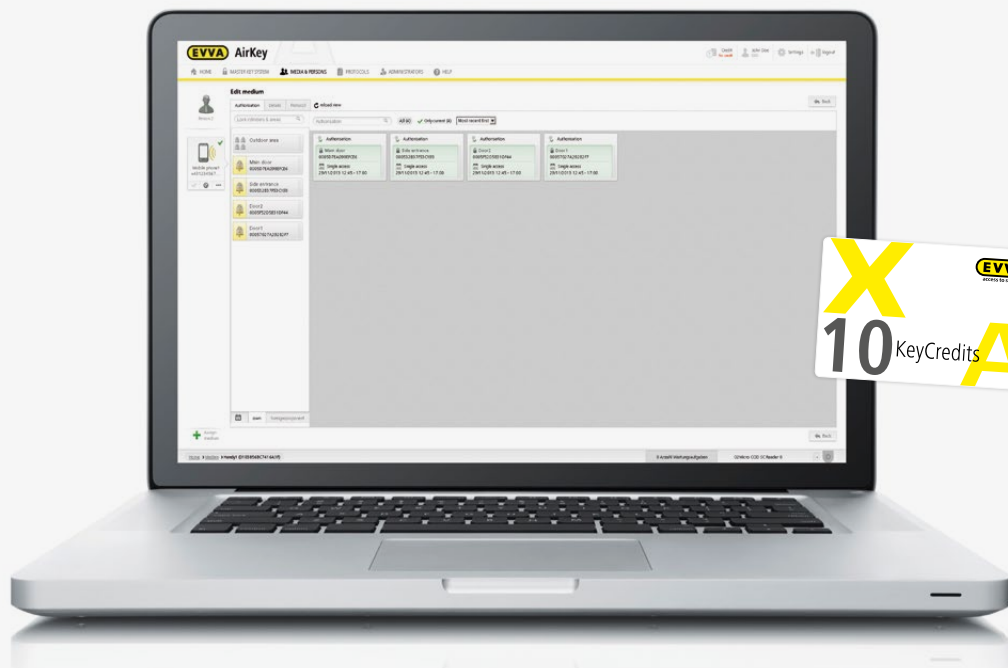

System and design

AirKey innovations are not just restricted to their revolutionary security concept. The simple operation and online administration are also very innovative.

Functions

AirKey offers all the important functions of an effective access control system:

- > Door management
- > User management
- > Creating door areas
- > Event log

Drag and drop

Never before has electronic access control been this easy. Conveniently grant authorisations using the drag-and-drop method.

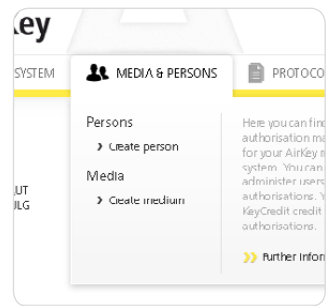

Multi-administration

Distributed company locations can be managed separately by several administrators.

Cross-platform compatibility

AirKey is browser-neutral, it runs on different operating systems and is available in ten languages

Mega menus

You will immediately feel familiar with the clearly arranged menu structure.

KeyCredits

The revolutionary EVVA KeyCredits ensure you only pay what you actually need.

› KeyCredits 10, 50, 100

For systems with just a few users and/or infrequent changes to access authorisations, we offer KeyCredits 10, 50 or 100. New and further KeyCredits can simply be added whenever you need them.

› KeyCredit Unlimited

KeyCredit Unlimited offers systems with more than 50 users and frequent changes unlimited access authorisation changes for a period of 1 or 3 years.

You can switch from KeyCredits 10, 50, 100 to KeyCredit Unlimited at all times. Any unused credits remain valid.

This is how it works:

Merely one KeyCredit is required to create and change access authorisations. As a rule, deleting access authorisations is free of charge.

Buying KeyCredits

KeyCredits are exclusively available from your EVVA-Partner. The purchased credits are uploaded to the AirKey online administration.

Creating access authorisations

Easily set up access authorisations for a mobile phone in the AirKey online administration. For instance: Person 1 is authorised to enter and exit door 1 and door 2 at certain times.

Debiting a KeyCredit

A KeyCredit is debited for the creation or change of access authorisations. The authorisations are directly sent to the mobile phone or the identification medium upon the next update.

Automatic backup

EVVA guarantees data security and backups on redundant EVVA servers.

Component sharing

Share your locking components with other users (shared office).

Privacy by design

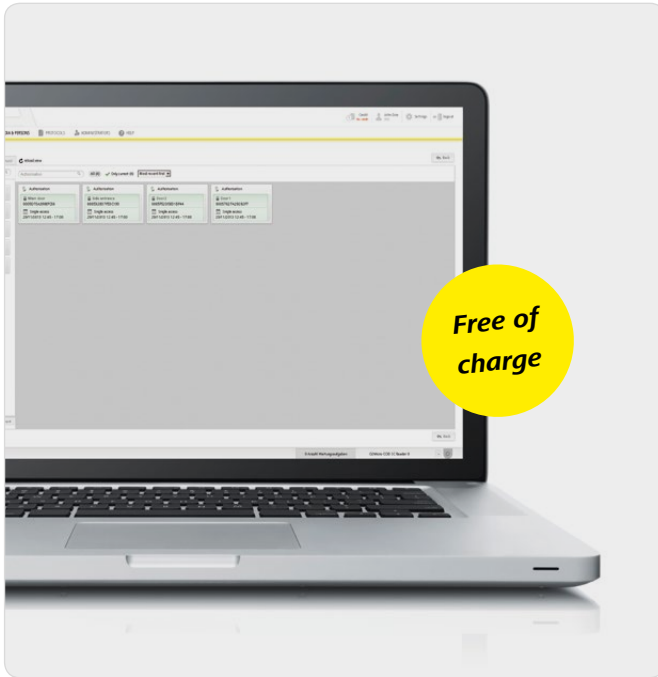

The technically sophisticated design uses cutting-edge security mechanisms to securely encrypt all data.

Doors up-to-date

The clear dashboard in the online administration lists all maintenance tasks.

Software | KeyCredits

Perfect for small and medium-sized companies

KeyCredits 10, 50, 100

KeyCredits 10/50/100 are the customised solution for small and medium-sized companies. Particularly if you change authorisations only in rare cases or only a few people access your facilities.

You benefit from all the features of a comprehensive access software and thanks to the free AirKey software, you only pay what you actually need. Merely one KeyCredit is necessary to create or change an identification medium with any number of access authorisations.

Switch to KeyCredit Unlimited anytime. It goes without saying that individual, unused credits remain valid and can be used once KeyCredit Unlimited has expired.

KeyCredits 10

Create or change an identification medium with any number of access authorisations ten times.

Recommended use	1-9 persons Few changes to authorisations
Product code	E.ZU.LM.KC010

KeyCredits 50

Create or change an identification medium with any number of access authorisations fifty times.

Recommended use	1-9 persons Frequent changes to authorisations 10-49 persons Few changes to authorisations
Product code	E.ZU.LM.KC050

KeyCredits 100

Create or change an identification medium with any number of access authorisations one hundred times.

Recommended use	10-49 persons Frequent changes to authorisations 50-100 persons Few changes to authorisations
Product code	E.ZU.LM.KC100

Perfect for large and medium-sized companies

KeyCredit Unlimited

KeyCredits Unlimited for 12 or 36 months are the customised solution for medium-sized and large companies.

No high initial investment costs for the software and, in contrast to KeyCredits 10/50/100, any number of changes to authorisations are included in this variant.

It goes without saying that you can optionally switch to 10/50/100 after 12 or 36 months.

Unlimited KeyCredits for 12 months

Unlimited creation of and changes to identification media with any number of access authorisations for a duration of 12 months

Recommended use	Over 50 persons for a duration of 12 months
	Frequent changes to access authorisations
	Over 100 persons for a duration of 12 months

Product code	E.ZU.LM.KC12M
--------------	---------------

Unlimited KeyCredits for 36 months

Unlimited creation of and changes to identification media with any number of access authorisations for a duration of 36 months

Recommended use	Over 50 persons for a duration of 36 months
	Frequent changes to access authorisations
	Over 100 persons for a duration of 36 months

Product code	E.ZU.LM.KC36M

Emergency power device

If batteries are not replaced in due time despite the warnings in the AirKey cylinder, you require an emergency power device to operate AirKey cylinders.

Product code	E.ZU.NG.V1
--------------	------------

AirKey app | Benefits

System and design

AirKey online administration is complemented by the AirKey app.

It saves access authorisations to consequently turn your mobile phone into an electronic key.

Smartphone is the key ring
Operate several systems using merely one NFC-compatible smartphone.

Free download
The AirKey app is available free of charge from the Google Play store.

Smartphone is the key
Create and update additional identification media on your smartphone using the AirKey app.

Secure element
The smartphone's secure element and the AirKey locking components securely protect your data.

Functions

- › Save access authorisations
- › Save access patterns in an event log

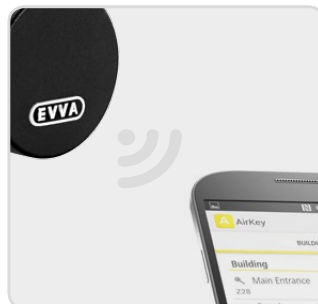

AirKey online administration

AirKey app

End-to-end encryption
Data is absolutely protected from decryption, from EVVA servers to AirKey locking components.

Contactless operation
Simply hold the smartphone to the locking component for contactless opening of the door.

Protected by PIN
The AirKey app may optionally also be secured with a PIN code.

Very simple maintenance
Assign maintenance authorisations to any smartphone.

AirKey app | Technical description

Installation

QR to access the Play store with AirKey app for Android™ mobile phones:
<https://play.google.com>

Compatibility

NFC

Android 4.0.0 or higher

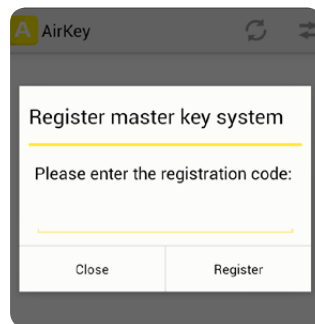

The AirKey app operates in conjunction with the AirKey online administration. It saves access authorisations to consequently turn your mobile phone into an electronic key.

The AirKey app also updates AirKey locking components and AirKey identification media using the AirKey online administration.

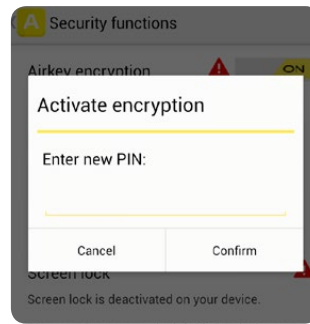

Installation process

Download the AirKey app
Simply download the AirKey app to your mobile phone.

Mobile phone registration
Simply enter the registration code of the AirKey online administration in the app.

Protected by PIN
The AirKey app may optionally also be secured with a PIN code.

Performance features

Version	AirKey app
Size	Approximately 5 MB
Authorisation memory	For individual doors For several doors For several systems
Operating modes	Standard Maintenance mode
Standard functions	Displays available authorisations Automatically updates or deletes authorisations Detailed view of authorisations Event log of access patterns Updates AirKey cylinders and AirKey identification media using AirKey online administration
Maintenance functions	Add and remove AirKey cylinders and AirKey identification media to the locking system Automatically displays maintenance tasks
Security features	PIN code (can be configured individually)

Contactless operation

Smartphone is the key ring

Protected by PIN

Smartphone is the key

Secure element

End-to-end encryption

A

AirKey cylinder

The AirKey cylinder is a high security product with superior design, suitable for indoor and outdoor areas. The system allows you to open doors using your NFC-compatible mobile phone or any identification media of your choice.

The high-quality AirKey cylinder offers security features, such as plug pulling and drilling protection, a rotary damper and an integrated secure element for secure data storage.

The modular design of the AirKey cylinder is also unique. It enables elongation adjustments on site and simplifies planning.

AirKey cylinder

*» The secure access solution
which can be unlocked with a mobile phone «*

AirKey cylinder | Benefits

Design

Signals

With red, green and blue, AirKey cylinders indicate the following: access granted, denied or NFC connection.

Various finishes

The available, metal finishes for AirKey cylinders include nickel, polished nickel or polished brass.

Ideally coordinated

The mechanical, inside thumb-turn is of a high quality and perfectly suitable for the overall design.

Additional benefits

- Elegant design, matches any escutcheon.

Function

Access control on both sides

Vital for areas that also require access control for persons leaving the facility.

Half cylinder version

The AirKey half cylinder fits in any key switch and it is therefore also suitable for garages.

Additional benefits

- Suitable for external emergency power supply
- The event log saves the last 1,000 events
- With blacklist function
- Particularly long battery life

Technology

Additional benefits

- Suitable for use outdoors
- Matches all conventional locks
- Also suitable for multi-point locks
- Operates with commercially available CR2 batteries
- 90 min fire protection
- AES encryption

Drilling and plug pulling protection:

AirKey cylinders are of a high, mechanical quality and equipped with drilling and plug pulling protection.

Modular design

The modular AirKey cylinder design enables subsequent elongation adaptations to simplify warehousing and add flexibility during assembly.

Anti-panic function

AirKey cylinders with their patented cam rollback function are suitable for all conventional emergency exit and panic locks as per EN 179 + EN 1125.

Additional benefits

- Easy assembly
- Suitable for any conventional door leaf thickness
- Supported by assembly videos and manuals

Assemble outside thumb turn

Insert the batteries into the outside thumb turn and assemble it on the cylinder body using the AirKey cylinder assembly tool.

Secure the cylinder

Secure AirKey cylinders to the lock using cylinder fixing screws.

Position inside thumb turn

Assemble inside thumb turn.

QR codes with assembly videos available!

AirKey cylinder | One-sided access

Assembly

QR code with assembly video

Standards and guidelines

AirKey cylinders with one-sided access are the ideal solution for doors with maximum security requirements on the inside and outside, featuring external access control. The mechanical thumb turn guarantees a way out from the inside at any time.

For instance, the cylinders are suitable for full-leaf doors and metal frame doors. AirKey cylinders are also suitable for existing doors in listed monuments as there is no need for drilling.

Assembly tip

Assembly requires the special assembly tool

» Page 60

Application examples

External doors on buildings
AirKey cylinders are perfectly suitable to secure the main, side or back entrances of buildings.

Maximum security
AirKey cylinders are particularly suitable for areas where security is paramount, such as server rooms.

Ideal for listed monuments
Ideally suitable for historically significant doors in which merely the cylinders can be replaced for reasons of monumental conservation.

Escape doors as per EN 179¹
Perfectly suitable for escape doors of all kinds with patented cam rollback function.

A

AirKey wall reader

The AirKey wall reader can be used for indoors and outdoors. In combination with the wall reader control unit, it is suitable for controlling electronic locking components in doors of all kinds, and much more. For example in sliding doors or swing doors, as electronic door openers, in lifts and in electronic gate systems.

In this process, the AirKey wall reader impresses with its superior design and high-quality material. The front of the wall reader is made of glass. The glass pane on the front as well as the matching frame are available in several colours and combinations.

AirKey wall reader

» *Easy to use, optimum security and distinguished visual appearance* «

AirKey wall reader | Benefits

Design

Slim design

Its slim construction height means the wall reader perfectly adapts to any environment.

Sophisticated materials

Equipped with high-quality, durable glass front panel.

18 colour combinations

Glass front panel and frame available in white, silver and black – frame in satin or polished finish.

Additional benefits

- Visual and acoustic status and function indicator
- Continuously lit RFID symbol

Function

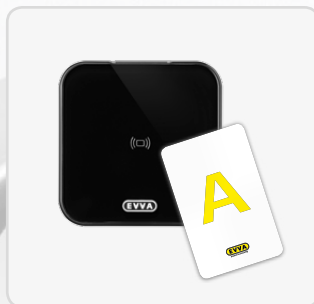

Actuate locking elements

From electrically operated locks to motorised cylinders – AirKey wall readers can actuate the most diverse locking elements.

Compatible with control elements

The simplest way to control automatic sliding doors, barrier systems and lifts.

Large reader unit

Enables secure and fast identification.

Additional benefits

- With blacklist function
- Last 1,000 events saved in an event log

EVVA

Technology

Additional benefits

- Distances of up to 100 m between wall reader and control unit
- ECDSA and AES encryption

Whenever you need them and wherever you are.

With IP65 protection, AirKey wall readers are suitable for the fiercest weather conditions.

High level of protection against tampering

The control unit can be securely installed indoors. The wall reader offers no targets for manipulation.

Guaranteed power supply

The control unit data cable securely supplies wall readers with power.

Additional benefits

- Easy and fast to assemble
- Practical bus system
- Frames available for flush or surface mounting
- No special assembly tools required
- Supported by assembly videos and assembly manuals

1. Connect the plug-in PCB

One wall reader can be connected to one control unit.

2. Flush-mounted frame is screwed onto the flush-mounted socket

A surface-mounted frame is also optionally available.

3. Connect the wall reader

Connect the wall reader cable to the plug-in PCB and insert the wall reader into the frame.

Assembly

Centre: side view of wall reader for flush installation (RU)

Right: Side view of wall reader for surface-mounted installation (RA)

Application examples

Ideal for electric strikes

Operate electric strikes or motorised locks on security doors using the AirKey wall reader.

Ideal for locking elements

AirKey wall readers are also suitable for motorised cylinder actuation.

Ideal for garage doors

Also operate garage doors using the AirKey wall reader, available in a colour to match your façade.

AirKey wall reader | Control unit

Standards and guidelines

The AirKey wall reader control unit is designed to activate electronic locking elements in any type of door, for example in sliding or swinging doors, for electronic door openers, lifts and in electronic gate systems, etc.

The control unit is operated in combination with an AirKey wall reader.

Application examples

Easy to accommodate

Due to the compact design, there are countless assembly options, such as in intermediate ceilings, control cabinets, on the wall surface, etc.

High switching performance

The control unit is equipped with two relays, each with a maximum switching performance of 250 VAC.

Technical information

Security features	Encrypted data transfer between wall reader and control unit
Standards and guidelines	CE-certified IP54 protection
Technical installation situation	Attachment: intermediate ceilings, control cabinets Up to 100 m distance between wall reader and control unit (recommended cable type: CAT5, max. 100 m, Rloop max. 2Ω)
Dimensions	160 x 160 x 60 mm
Power supply	12-24 VDC mains adapter, min. 24W (see accessories) Data buffered for up to 72 h in the event of power cuts
Control situations	1 AirKey wall reader – 1 door
Switching output	At max. two relays per AirKey wall reader max. 250 VAC max. 16 A (ohmic) briefly, max. 10 A (ohmic) permanently
Conditions of use	-25 °C to +70 °C < 90 % humidity, non-condensing IP rating IP54

Support | Parameters, tips and tools

Comprehensive and responsible consultation is particularly important with regard to security.

For this reason, we at EVVA support our partners with our manufacturer expertise. Firstly, in dedicated training sessions. Secondly, by joining forces with our partners throughout support and planning.

Mechanical or electronic solution?

Each facility has different requirements regarding the access systems that secure it. Purely mechanical or electronic systems may be perfect to suit your needs. Usually, it's a combination of both, making facilities efficient, convenient and secure.

	Mechanical systems	Xesar	AirKey
Flexible extension		●	●
Flexibly assign authorisations		●	●

Planning | Project planning + prices

The most important aspect of planning and project planning is to quickly and comprehensively analyse the situation and customers' demands. This is either done by the EVVA-Partner alone or in collaboration with an EVVA advisor.

Once the basic requirements have been fully clarified the technical and financial parameters can be determined. This prevents unexpected, additional costs.

Planning example

1. Customer request

You have established the following after comprehensive consultation: the customer requires a high level of security at the access door (door 1) and demands a polished nickel look.

2. Product configuration

Product codes are easy to respond to.

Go to the AirKey cylinder configuration » **Page 50**

- E** Electronic solutions
- A** AirKey
- PZ** Profile cylinder
- One-sided access** **KZ-S** Model
- Cylinder lengths** **31/K31** Cylinder lengths A/I
- Polished nickel** **NP** Finish
- Thumbturn shape
- Emergency function
- Elongated outside thumbturn axis
- Cam

Planning tip

- › Use the EVVA door check list to record customer requirements and the characteristics of the door, such as required cylinder lengths.
- › Take photographs. This will allow you to quickly and easily add missing information.

3. Prices and offers

A brief glance at the price list and the offer is complete in no time.

Example
Assembly video
for AirKey cylinders

Setup | That's it

Simple orders

Quickly and easily send us your completed order form from the Partner price list.

Quick assembly
Simple assembly options and great video documentation keep setup times to a minimum. Scan the QR code*** and watch the assembly video on your mobile. It can't get any easier!

Assembling
AirKey cylinders

Register to the online administration and enter components

Enter KeyCredit codes in the online administration.

Transferring access authorisations

Handover

We quickly complete projects to satisfy our Partners and customers

* Applies for quantities up to 100 units.

** You require an appropriate app to scan QR codes which is usually available free of charge.

Handover + operation | Components

Documentation

Partners hand over documentation to facilitate and ensure maintenance and adaptations to the system.

Said documentation may consist of several elements.

Completed project and door check lists

Photographic evidence and plans of the development project

System manual and data sheets are available online
