

# Cardax FT Feature Information Challenge

The Cardax FT Challenge feature provides the ability to double-check the identity of cardholders passing through a nominated door via visual comparison of a cardholder image against a live image from a third party system.

For every attempted access, the Cardax FT Challenge feature displays a cardholder image from the cardholder record. An operator (with Challenge privileges can then make use of a third party CCTV or DVR system to perform a visual comparison between the cardholder image on the screen, and the image from the CCTV or DVR system.

Cardax FT Challenge can operate in either of two modes: View Only Challenge and Controlled Challenge.

Both modes require valid card privileges for the door being accessed.

View Only Challenge mode allows the operator to passively inspect the images without the ability to control access.

Controlled Challenge mode expands on the View Only functionality by forcing the operator to grant or deny access based on the identity of the cardholder, adding an additional tier to security.

Cardax FT Command Centre is the configuration and operational interface for all Challenge functionality. Specific doors can be scheduled to operate in Challenge controlled access mode at specified times. Any door on the Cardax FT system can operate in Challenge mode from any one Cardax FT workstation at a given time.

Up to 5 separate Challenge windows (each for a Challenge door) can be displayed simultaneously on a single workstation. Using Cardax FT Command Centre, the site can configure the Challenge window to display specific cardholder details / personal data fields.
