# WIN-PAK™ IP

Top 10 Dealer Benefits

The integration platform for market leading access, intruder, video and visitor management products

Using full software based integration, WIN-PAK IP pulls together the Honeywell WIN-PAK access control system, the GalaXy intruder control panel (Classic and G3 ranges), the Fusion digital video recorder and the LobbyWorks EVM system. The ability to integrate these market leading Honeywell solutions provides countless opportunities to offer end users major enhancements to existing, or significantly improve the operation of new security systems..

Easy IP based integration

IP based integration ensures easy configuration, faster set up and lower cost installations. There is no need to run extra cables for hard wired relays. Both the GalaXy and the Fusion DVR just connect in over IP, and the automatic upload and synchronization of the GalaXy panel configuration simplifies the upgrade of existing intruder sites to integrated solutions.

Simple and modular upgradeability at any time

The modular approach means easy build-up of systems as funding becomes available - with no rip out of redundant equipment. In particular, each element of the security system (intruder, CCTV, access, EVM) can be properly tailored (and costed) to meet its individual requirements. The elements can also be installed in any order and easily integrated when appropriate. Any problems with one part of the system only affect that element — and do not bring the whole security system down.

Enhance the capability of existing intruder systems

Use WIN-PAK IP to enhance existing intruder systems through the dynamic graphical floor plans, improved centralized reports, GalaXy data logs and the on-screen virtual keypad. The latter is particularly helpful for staff used to programming via the GalaXy keypad. WIN-PAK IP brings all the features of GalaXy Gold into the world of a comprehensive fully integrated security operator s station.
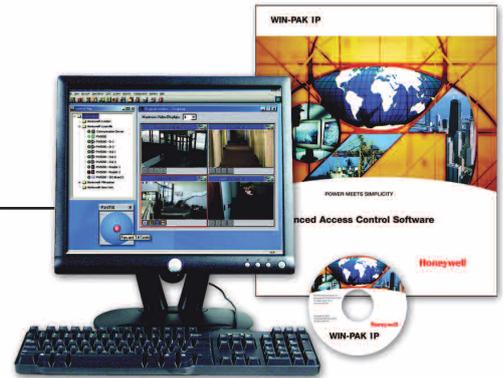

Manage multiple GalaXy intruder panels

Currently GalaXy panels only run separately. WIN-PAK IP allows you to manage multiple GalaXy panels from one head end system giving enhanced control and flexibility. (Current system limits are 10 GalaXy panels depending on the scale of the population of zones on the panels. For integration of larger numbers of GalaXys, please contact us for more assistance).

Total flexibility through macros

Unlimited customization of cause and effect across the whole security system can be created using easy to programme macros (command files). For example, if a GalaXy zone is set, the local doors can be locked or the local reader modes changed to card and pin to prevent unauthorized entry into an alarmed area - minimizing the risk of false alarms.

WIN-PAK™ IP

Top 10 Dealer Benefits (Continued)

Set/unset the intruder system via the access readers and cards

Full software integration allows specific privileged cards to be used for the setting and unsetting of groups within GalaXy, eg: an appropriate card can be used for unsetting the intruder alarm on swiping the card at a door.

Seamless digital video integration with access and intruder systems

The integration to the Fusion DVR allows the storage, and easy identification, retrieval and playback of events and alarms. Access or intruder events can be used to trigger cameras or recordings. Users can view live video or easily retrieve video playback of access or intruder events directly within the WIN-PAK IP system.

Standardised head end package with no hidden costs

WIN-PAK IP provides a full access, CCTV, intruder and electronic visitor management integration solution with unlimited doors, controllers and card holders without the significant extra cost and issues of commissioning a separate, customised head end software package.

One Honeywell system - One Partner of Choice

For both end users and installers there is a major benefit in all the security system software and hardware coming from one supplier. No more issues of incompatibility or being batted from one manufacturer to another in the event of any problems. One global security player standing behind the installer providing comprehensive support and service. One Honeywell brand giving end users total confidence in the technical capability and reliability of the products and in the absolute commitment to end user satisfaction.
