IDESCO

Idesco ID Service

Conveniently send mobile access credentials
to your users' phones - *from your own system*

Idesco ID Service lets you send mobile credentials to users' phones directly from your own system.

- Lets you continue administering user and credential data in your access control (or other) system
- You do not need to administer a separate or parallel system
- Integration is seamless and secure, using a technology-independent interface
- Simplifies mobile registration process for users with customizable user notifications (SMS or/and email)
- Idesco ID mobile app in user phones included free of charge
- Idesco ID app can host credentials for different systems
- Idesco ID app is available for both Android and iOS mobile devices
- Idesco ID compatible with 8 CD 2.0 MI reader family
- SDKs will also be offered for extending Idesco ID support to your own app.
