KeyWatcher® Fleet

taking today's keys into tomorrow
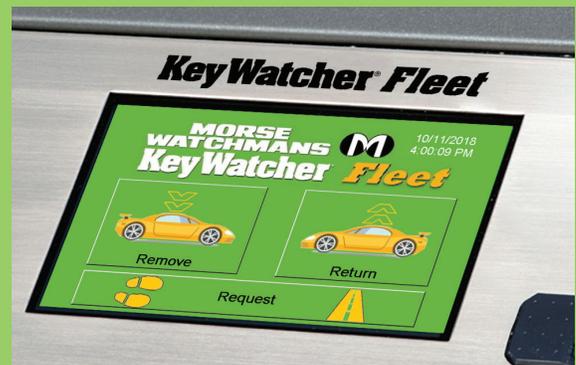

Manage and optimize your fleet and reduce expenditures with the industry's only electronic key control system with fleet management software. Get the pulse of your fleet in an instant with an easy-to-follow dashboard that displays vehicle use, bookings, status, and reporting charts. The Watchmans Smarts™ software allows you to create policies to enable automatic allocation of vehicles for each driver, configure vehicle pool distribution by lowest mileage, first in/first out, predefined priority, fuel level, and more.

Built on the robust and proven KeyWatcher Touch hardware, KeyWatcher Fleet uses the same 16, 8, and 6-key modules that allow you to manage thousands of keys and users with a single system, or a network of multiple systems off a single server. PIN codes, card readers and biometric access control methods ensure that only authorized users gain access to the system.

Maximize the life of your fleet with KeyWatcher Fleet from Morse Watchmans. It's a driving force for secure and efficient fleet utilization.

MORSE WATCHMANS

Benefits

Powerful - Manage thousands of users and vehicles

Flexible - Tailor fleet requirements through booking pools, vehicle bookings, and on-demand functions

Efficient - Monitor vehicle use through a reports function for more efficient vehicle use and distribution

Configurable - Pull vehicles offline easily for required service and inspections with maintenance notifications

Cost-Saving - Assign vehicles by mileage to balance wear and tear; run reports to identify unnecessary vehicles

Intelligent - Reassign users instantly and automatically to new vehicles when original bookings are unavailable

Dashboard to Manage Vehicle Pools
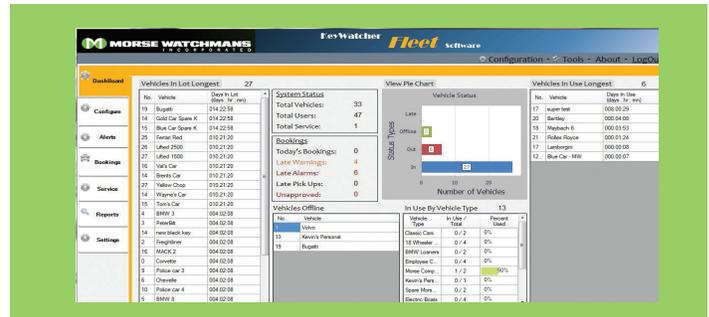

Features

Reporting	• Maximize fleets to full potential and know when vehicles are over and under-utilized • Generate reports for utilization, capacity, inventory, status, and more • Increase efficiency with detailed data usage
Dashboard	• Observe an overview of bookings, vehicle use, status, and charts at any time
Vehicle Pools	• Split fleets into "pools" to assign users to vehicles or specific users to specific pools • Customize pool types such as lowest mileage, first-in/first-out, most fuel/charge, priority • Create "preferential exemptions" by assigning users to their preferred vehicles upon request
Bookings	• Assign users to vehicle pools through custom dispatch rules to improve utilization • Set bookings by specific dates, times, or on a repeat schedule • Mix and match vehicle pools within bookings for more user options • Book specific users to specific vehicles
Service	• Remove vehicles for service with indications and staff notifications and staff sole key access.
Triggers	• Flag vehicles for service by mileage, time, or other attributes (optional add-on)
API Support	• Integrate KeyWatcher Fleet with other vehicle data systems
Access Control	• Manage non-fleet keys within the same system to control access to other areas in your facility
