Tamper-Proof KeyRings™

taking today's keys into tomorrow

Organize and manage all facility keys efficiently and cost-effectively with Morse Watchmans' tamper-proof KeyRings™. Our reusable key ring and replaceable hub technology allows you to add and remove keys quickly and easily. KeyRings innovative design eliminates the need for clumsy crimping and painstaking, wasteful cutting through flimsy metal rings. Simply attach a new colorful hub to one side of our durable, heavy-duty ring, add or remove keys, and click the other side of the ring into the hub for a strong and secure closure.

Our KeyRings come in several sizes and the hubs come in several colors to help you organize sets and groups of keys. The hubs are also stamped with unique serial numbers to help identify each ring and key group, which also helps to prevent misuse and substitutions.

Morse Watchmans KeyRings are an economical, tamper-proof, and convenient security solution that are perfect to use alone or with any of our key management systems.

MORSE WATCHMANS

Tamper-Proof KeyRings™ with Hubs

Use our tamper-proof KeyRings and hubs alone or with any of our KeyWatcher systems to organize your keys more efficiently and securely.

- No tools required to close assembly
- Re-useable 5/32" stainless steel rings in several sizes
