

Net2Air hands free tokens

From 1m to 3m read range

Active tokens with replaceable batteries

Batteries last an average of 5 years

Works as a standard passive token with non-hands free readers

Compatible with P series readers equipped with the Net2Air interface

Uses Net2Air wireless technology

About

The term 'Hands free access control' means the token that identifies a user is read from within a pocket or handbag. No hands required. This is useful for gates and barriers, loading doors and where disabled or elderly people require access. The Net2Air hands free tokens, in conjunction with Net2Air hands free interface, achieve this using the unique Net2Air wireless technology.

Installation

Net2Air hands free tokens will only work with P series readers equipped with a Net2Air hands free interface.

Operation

Net2Air hands free tokens work in active and passive modes. They give a range of between 1m and 3m on any reader equipped with a Net2Air interface. They work in passive mode with all other Paxton Access proximity readers. The tokens are enrolled onto the Net2 system using the standard desktop reader or by typing in the token number.
