The Pyronix
STERLING 10
Control Panel

The Sterling 10 is suited to most domestic and light commercial applications.

Eight fully programmable zones with three dedicated for Personal Attack, Tamper and Push to Set allows the system to be designed to meet your individual requirements.

Features:

- **8 fully programmable zones with 3 dedicated for PA, Tamper and Push to Set.**
- **4 level settings allow the system to be part set in various combinations.**
- **Up to 4 attractive keypads (LCD or the new ICON) can be fitted with the system allowing the main panel to be concealed in a cupboard or loft area.**
- **A 100 event memory log stores information not only about alarm activation's but also which user sets and unsets the system.**
- **The Sterling 10 can be connected to communication equipment which may be linked to an Alarm Receiving Centre.**

STERLING 10
Control panel
SPECIFICATIONS

Fully Programmable Zones

The eight fully programmable zones with four level settings allow the system to be tailored to meet your specific needs. This gives you the flexibility to protect various combinations of rooms/areas whilst leaving others free to enable movement around the property e.g. a part set program protecting all downstairs areas whilst leaving the upstairs free during the night.
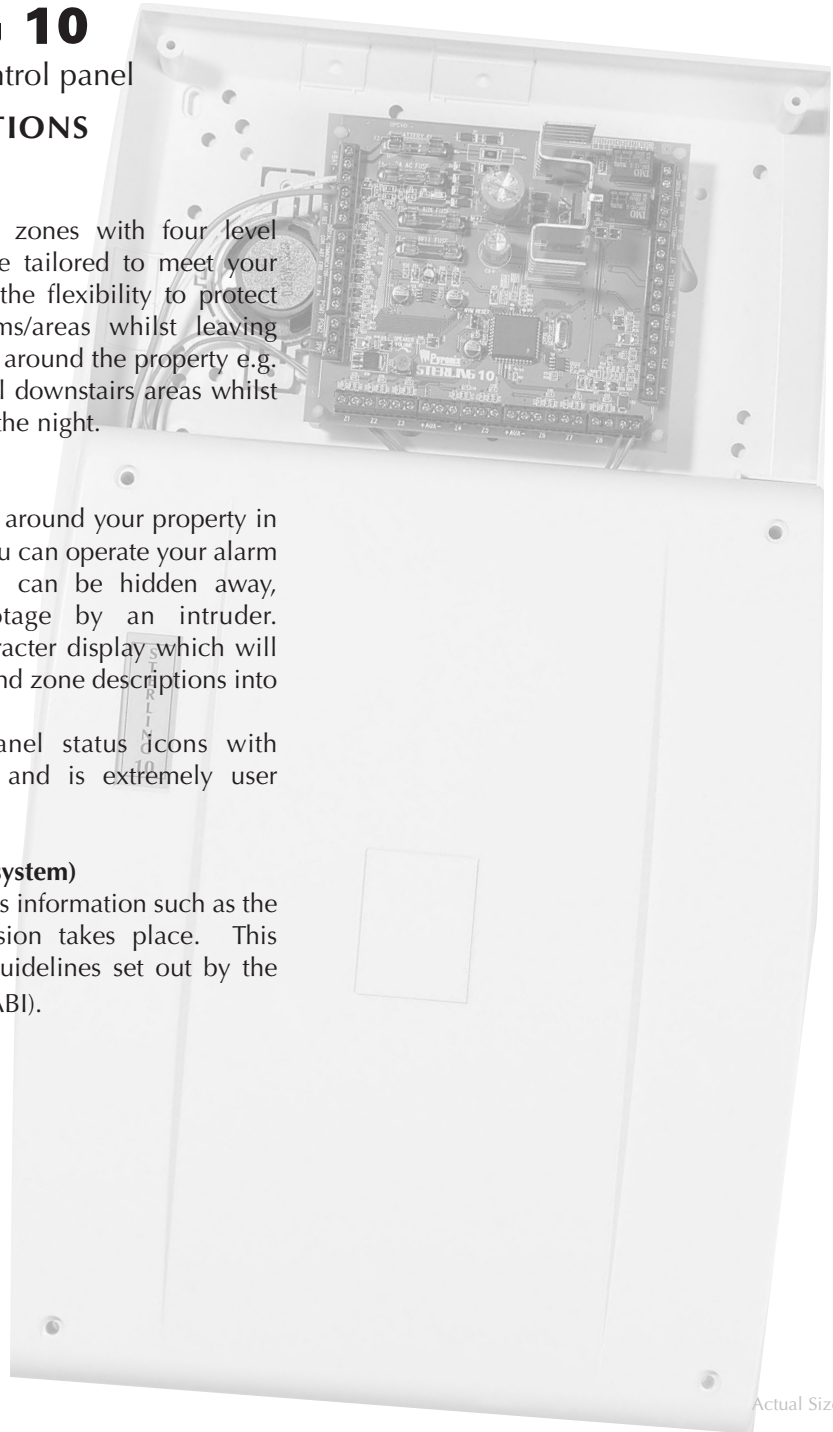

Remote Keypads

Up to 4 keypads can be placed around your property in areas of convenience, so that you can operate your alarm system whilst the main panel can be hidden away, limiting the threat of sabotage by an intruder. The LCD keypad has a 32 character display which will allow you to enter user names and zone descriptions into the panel rather than numbers.

The ICON keypad has 8 panel status icons with dedicated P.A. and fire keys and is extremely user friendly.

Property Insurance (Bells only system)

The 100 event log memory stores information such as the zone area in which an intrusion takes place. This memory log conforms to the guidelines set out by the Association of British Insurers (ABI).
