

Seamlessly bring your security and human resources systems together to provide a single view and a single point of control

Connect Security to HR/IT Systems

The C•CURE® Enterprise Integration Server (EIS) allows the real-time transfer of information between the C•CURE 800/8000 access control system and the Human Resource/Payroll module of SAP® or PeopleSoft®.

Boost Security, Eliminate Errors, Reduce Costs

The C•CURE EIS streamlines the process of enrolling personnel data into the C•CURE 800/8000 system by importing key data from SAP or PeopleSoft, eliminating duplication of effort, delay, and errors.

Additional Integration

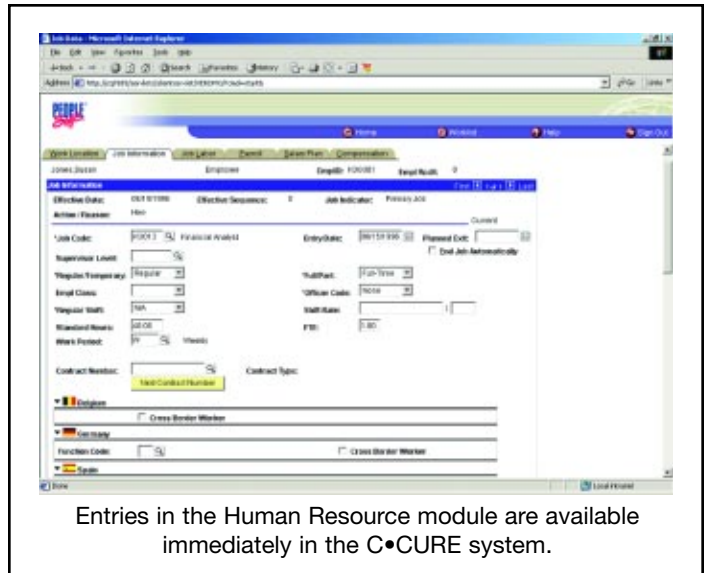

The C•CURE EIS also enables integration with the cost accounting, project costing, asset management, and asset tracking modules of SAP or PeopleSoft. This allows the C•CURE access control system to become an integral part of a company's overall strategic information technology infrastructure. For example, the C•CURE EIS can integrate C•CURE 800/8000 with the time and attendance module of the HR system, eliminating the need for separate time and attendance systems. C•CURE EIS can facilitate the exchange of information between C•CURE 800 and other systems such as an LDAP server, Active Directory service, Kronos, ADP, MedTech, or RAPP to keep access information current.

Features

- Seamless information exchange between HR and security systems
- Integrated personnel enrollment into C•CURE 800/8000 system
- Full data encryption
- Masking of data for confidentiality of information
- Exchange information with multiple enterprise systems, including LDAP and Active Directory
- Automated information flow for real time status updates
- Maintains consistent employee privileges, records, entry and exit times in human resources and C•CURE 800/8000 System
- Highly flexible and customizable implementation
- SAP and PeopleSoft experts perform the integration

Benefits

- Employee information available globally and instantly within the enterprise
- Lower costs of entering data into C•CURE 800/8000
- Reduced security risk when terminated employees' access privileges are instantly revoked everywhere
- Reduced total cost of ownership for integration of HR and security databases
